

Remsdaq in Norway

StarWatch system installed at the Entra HQ

Westec AS, Remsdaq's long term partner in Norway, recently secured a contract to supply the Entra HQ in Oslo with a StarWatch enterprise level integrated access control system.

Entra is one of Norway's most prominent real estate companies and an industry leader in developing and managing energy efficient buildings. In this first phase, the HQ building has been secured with a 400 door, 7,500 user system.

Remsdaq's StarWatch platform, utilising a distributed StarNet hardware architecture, was selected by Entra as being a proven solution offering scalability combined with advanced functionality which includes programmable logic, custom badge printing, advanced alarm handling, elevator control and seamless integration with SALTO wireless locking.

Ray Colston, Operations Director of Remsdaq, explained 'we are delighted to have been chosen to supply this prestigious project amongst such tough competition and look forward to securing further projects in the coming months.'

Adding to Ray's comments, Trine Heggernes, Westtec's Managing Director, said 'securing this project was a great success for all parties involved and further strengthens Westec's position as a leading security systems integrator in Norway.'
